## Implemented User Story

**Feature:** Use drop down to answer questions to dynamically change values

As a user of the system

I should be able to change a question answer from the Questions Index Page via drop down

Scenario: Change question answer via drop down

Given I am on the Questions Index Page

And I see the question keyword "Finance"

And I set the question\_level drop down to "5"

Then I should see the answer field of question "Finance" as "5"

**Feature:** Submit a file to Outsourcing of Network Services Assessment Tool System

As a user of the system

I should be able to upload a csv file to the system

Scenario: Submit an existing form to and display the question list

Given I am on the upload page

And I choose the file and press upload

Then the file should be parsed

And the content is stored in the database

And I should see the page of questions listed

- Created and adapted database schema to fit relational database questions table
- Changed the user story to be more specific
- Adapted to the changes of the UI
- Lo-fi UI adapted to be on same page as the Questions Index Page for reduction of user-site navigation to improve user experience

# Coverage

We tested our implementations of Iteration 1 which included happy and sad paths for our uploading feature. Untested lines referred to early future pages and functions.

All Files (65.96% covered at 0.9 hits/line)
