TAMURAT Iteration 0 Report

Scrum Master: Yixu Chen

Product Owner: Feiyan Yu

GitHub repo: https://github.com/teamtreenewbee

Pivotal Tracker: https://www.pivotaltracker.com/n/projects/2318271

Vimeo link (Client Interview): https://vimeo.com/325282104

Team member(alphabetical order):

- Boquan Tao
- Feiyan Yu
- Lijiu Liang
- Shibo Wang
- Yixu Chen
- Zheyong Sun

Meeting Time

11:00 am - 12:00 am, Mar 8 2019, HRBB 515

9:00 am - 4:00 pm, Mar 11 2019, Evans 6th

Customer Requirments

There is a rigid demand for government agencies to determine whether or not a network service is appropriate to be outsourced from a certain company. Each company should answer a series of questions and provide their evidence of each question for validators to evaluate. And based on these evaluations, decision makers choose a company with best performance. In addition, the system also needs one or more administrators which are responsible for managing the privilege of other accounts. The main customer need is to add a new kind of user, administrator, into this existing system and this new role will be responsible for managing all accounts in the system.

Stakeholders

Company, validator, decision maker, administrator

Overall strategy for learning/improving the prior code

This is a legacy project, we will form 3 small teams of 2 people to do pair programming for each user story.

For this term, we want to add some new features and finish some previous features. For example, the legacy code already have csv input feature, but it havn't realized storing the files in cloud and display it to the validator. Besides the csv file for answering questions we will add a feature allowing user to upload multiple pdf files as evidences to allow validator to evaluate the level (such as reliable, suffienct, unkown, insuffient) for each questions.

We will also furnish some detail of the previous app such as the flash message if the password is wrong when log in. Add forget password feature.

A new administer account will be used to manage the role for other accounts. Every account registered in the system have to be approved by the admin.

Validators and decision makers will be able to see the level evaluated by other validator and who evaluate which question.

User Stories

Feature1: admin changes roles of other accounts

As an admin

So that I should manage the privilege of other accounts

I want to change the roles of registered users

Feature2: user creates an account

As a user

So that I want to use the function of system

I want to create an account to be approved by an admin

Feature3: forget and reset password

As a user or admin

So that I may forget or want to change password

I want to reset password via email

Feature4: notice if password incorrect

As a user or admin

So that I want to get noticed when password incorrect

Feature5: company user could upload pdf

As a company user

I want to upload several pdf documents as my company evidence

So that validator can see or download them

Feature6: evaluate evidence by validator

As a validator

I want to evaluate evidence from companies

So that I can give different levels to each question

Feature7: More than one validators

As a validator or decision maker

I want to see who validates which question

Feature8: Import and Export Excel

As a company user

I want to download template(excel) to fill questions and upload it with evidence as a zip
